

Amendments to the Claims:

Claims 1 through 9 are amended and claims 10 through 20 are added. Please amend the claims as follows.

1. (Currently Amended) A package ~~decoration~~—with a pop-up display decoration comprising:

a package having a side,

a foldable panel ~~sized to overlie~~ overlying at least a portion of ~~at the~~ side of ~~at the~~ package, the foldable panel having a fold line along which the foldable panel folds and which defines a first section and a second section of the foldable panel that overlie each other when the foldable panel is folded along the fold line, and

a pop-up display affixed to the foldable panel and formed of one or more sheets that are configured to fold into a generally flat and compact configuration that is at least partially enclosed between the first and second sections of the foldable panel when the foldable panel is folded along the fold line, the pop-up display is affixed to each of the first and second sections of the foldable panel and expands from the flat and compact configuration between the first and second sections of the foldable panels when the first and second sections overlie each other to form a ~~three~~-dimensional display when the foldable panel is opened along the fold line to position the first and second sections extending from each other along the fold line.

2. (Currently amended) The package with a pop-up display decoration of claim 1 further comprising a band that holds the foldable panel to the package and extends from the panel around the package.

3. (Currently amended) The package with a pop-up display decoration of claim 1 wherein the foldable panel includes a greeting card section for displaying a greeting.

4. (Currently amended) The package with a pop-up display decoration of claim 2 wherein the foldable panel includes a greeting card section for displaying a greeting.

5. (Currently Amended) The package with a pop-up display decoration of claim 2 wherein the popup display forms a dimensional display by joined panels.

6. (Currently Amended) The package with a pop-up display decoration of claim 1 wherein the popup display forms a dimensional display by forming a panel to generally conform to at least a portion of the outer surface of a represented three dimensional object.

7. (Currently Amended) The package with a pop-up display decoration of claim 4 wherein the popup display forms a dimensional display by forming a panel to generally conform to at least a portion of the outer surface of a represented three dimensional object.

8. (Currently Amended) The package with a pop-up display decoration of claim 1 wherein the popup display forms a dimensional display by forming two or more joined panels ~~a panel~~ to generally conform to at least a portion of the outer surface of a represented three dimensional object ~~and by one or more joined panels~~.

9. (Currently Amended) The package with a pop-up display decoration of claim 4 wherein the band is a ribbon.

10. (New) A pop-up display package decoration comprising:

a foldable panel sized to overlies a portion of a package, the foldable panel having

a display side,

a package side, and

a fold line along which the foldable panel folds and which defines a first section and a second section of the foldable panel,

the foldable panel folds along the fold line to cause the display sides of the first and second sections to face each other,

the foldable panel constructed to engage the package to resist movement on the package, and

a pop-up display affixed to the display side of the foldable panel and formed of one or more sheets that are configured to fold into a generally flat and compact configuration that is at least partially enclosed between the display sides of the first and second sections of the foldable panel when the foldable panel is folded along the fold line, the pop-up display is affixed to the display sides of each of the first and second sections of the foldable panel and expands to form a dimensional display when the foldable panel is opened along the fold line to position the first and second sections extending from each other along the fold line.

11. (New) The pop-up display package decoration of claim 10 further comprising a band that holds the foldable panel to the package and extends from the panel around the package.

12. (New) The pop-up display package decoration of claim 10 wherein the foldable panel is constructed to resist movement on the package by including an adhesive patch on the package side of the foldable panel that engages the package to resist movement of the foldable panel on the package.

13. (New) The pop-up display package decoration of claim 10 wherein the foldable panel includes a greeting card section for displaying a greeting.

14. (New) The pop-up display package decoration of claim 10 wherein the popup display forms a dimensional display by forming a panel to generally conform to at least a portion of the outer surface of a represented three dimensional object.

15. (New) The pop-up display package decoration of claim 14 the foldable panel includes a greeting card section for displaying a greeting.

16. (New) A method for decorating a package comprising the steps of

 providing a pop-up display package decoration having a foldable panel sized to overlie a portion of a package and a pop-up display that is affixed to the foldable panel and is formed of one or more sheets that are configured to fold into a generally flat and compact configuration when the foldable panel is folded, the pop-up display is affixed to the foldable panel and expands from the flat and compact configuration to form a three dimensional display when the foldable panel is opened,

 opening the foldable panel to form the pop-up display into the three dimensional display,

 positioning the pop-up display package decoration on a package, and

 causing the foldable panel to engage the package to resist movement on the package.

17. (New) The method for decorating a package of claim 16 wherein the step of causing the foldable panel to engage the package comprises:

 providing a band that is sized to extend around the package,

 causing the band to engage the pop-up display package decoration and to extend around the package to secure the pop-up display package decoration to the package, and

extending the band at least partially around the package to secure the pop-up display package decoration to the package.

18. (New) The method for decorating a package of claim 17 wherein the band that is provided by the step of providing a band that is sized to extend around the package is a ribbon and wherein the step of causing the band to engage the pop-up display package decoration includes causing the band to overlies the foldable panel.

19. (New) The method for decorating a package of claim 16 wherein the foldable panel includes a greeting card section displaying a greeting and wherein the popup display forms a dimensional display by forming a panel to generally conform to at least a portion of the outer surface of a represented three dimensional object.

20. (New) The method for decorating a package of claim 16 wherein the step of causing the foldable panel to engage the package comprises providing a foldable panel that is constructed to engage the package to resist movement on the package.
